Kathryn Cervi, C.R.N.P., Women's Health Care Nurse Practitioner

POSSIBLE SIDE EFFECTS OF GENESIS TREATMENT

1. HEAT: A slight warming sensation might be experienced during the laser treatment, which should cause little or no discomfort and does not require any anesthetic cream
2. REDNESS: Although most patients report few if any side effects, the most common is a slight redness that disappears quickly
3. EYE EXPOSURE: Protective eyewear will be provided during the procedure and is extremely important to keep on at all times during the treatment. This will protect your eyes from accidental laser exposure, which could result in permanent eye damage.
